

PROVISION OF TECHNICAL MANAGEMENT AND CIVILIAN CREW FOR MULTI-ROLE AVIATION TRAINING VESSEL MV SYCAMORE

The Project

The Royal Australian Navy (RAN) has procured the MV Sycamore from the Damen Shipyard Group.

The MV Sycamore will perform diverse roles for the RAN including; training, helicopter-related operations, torpedo and mine recovery, dive support, target towing, consort duties, and unmanned aerial vehicle support.

Project Highlights

Teekay proudly embarked an Australian based crew in Sydney to undertake preparations to phase in the management and operating framework to support her introduction into service and homeporting in Sydney, Australia.

Under a separate services contract, Teekay will provide;

- Operating Support/Ship Management Services (Technical Management, Crewing Services, Support Management and Statutory Compliance),
- Engineering Support (including configuration management and Flag and Class survey upkeep),
- Maintenance Support (including preventative and corrective maintenance), and
- Supply Support (including identification, acquisition, warehousing and maintenance of tools and equipment)

Teekay's experience in vessel operations and management allows them to tailor and align existing takeover procedures and check lists. This provides the Commonwealth with a low risk phase-in schedule and allows Teekay to work alongside the RAN crew as they familiarise with the operation of onboard systems.
